SKILLS

Languages: TypeScript, JavaScript, Java, HTML5, CSS3

Frameworks: React, Node.js, Spring Boot, .NET

UI & Forms: MUI, React Hook Form, Zod, Material React Table

Databases: SQL (MSSQL)

Tools: Git, Vite, Docker, Figma, Axios

Auth: CAS Authentication, JWT

EDUCATION

Sakarya University

B.Sc. Computer Engineering

2020 - 2025

LANGUAGES

Turkish — Native

English — B1

COMMUNITIES

Mavidurak-io — Community Builder, 2020-2022

SAU Siber

WORK EXPERIENCE

32Bit

Sep 2023 - Present · Remote

Frontend Developer

Bancassurance Platform (Allianz Turkey) — *enterprise commission management system*

- Developed Java/Spring Boot REST endpoints powering the platform's reporting modules, implementing data retrieval services in line with the organization's enterprise security standards.
- Built the frontend from the ground up: React/TypeScript/MUI architecture, a reusable React Hook Form + Zod form layer, and shared patterns adopted as the team standard.
- Implemented business-rule-heavy UI including commission sharing rules with auto-normalizing percentage distribution across participants, and a weighted performance-period scoring slider with minimum-width band layout.
- Built the data-grid layer on Material React Table with server-side pagination, filtering, and sorting to keep large commission datasets performant.
- Integrated CAS single sign-on and designed the service layer architecture with Axios interceptors for centralized authentication, error handling, and request lifecycle; supported Docker/nginx deployment to remote environments.

Agent Campaign Management (Allianz Turkey) — *campaign targeting and agent performance tracking*

- Building Java/Spring Boot REST services for campaign and achievement data, following the same enterprise security standards.
- Developing feature modules for campaign targets and achievement tracking, including a dual-ring gauge visualization and tier-based (barem) calculations that mirror business rules exactly.
- Built the AgentBar performance summary component using CSS container queries with a dual compact/wide layout architecture and full i18n support.
- Established the team's AI-assisted development workflow — structured knowledge base and conventions file — and introduced it through internal sessions.

Earlier at 32Bit

- Built the frontend of a BAM (Business Automation Manager) platform and owned UI development for an internal AI-powered Q&A assistant.

PUBLICATIONS

- Implementing Multi-Language Support with React Intl and Provider Architecture — *Medium*
- Building a Clean MUI + React Hook Form + Zod Architecture in React — *Medium*

PROJECTS

Alinirmi — Product Review & Recommendation Platform

github.com/Metecode/alinirmi.com

- Full-stack product review platform built with React and .NET Web API with JWT authentication.
- Designed the relational schema (users, products, votes, nested categories) and wrote the SQL behind rating aggregation and category tree queries.
- Deployed frontend and backend with domain integration.

Toyota Vehicle Error Detection System · Jul 2023

React, Context API · github.com/Metecode/TOYOTA-32bit-project

- Error detection and logging application built during internship for Toyota's modernization initiative at 32Bit.
